

D R Baling
WIRE MANUFACTURERS

DR Baling Wire Ltd (DRB) is a manufacturing company specialising in all forms of baling wire. With over 50 years' experience DR Baling stands at the forefront of baling wire manufacture in the UK.

We have consistently invested in the latest technology resulting in the most sophisticated and innovative baling wire in the industry, ensuring a flawless, reliable product. Our commitment is to the production of a peerless product, unsurpassed within the industry, yielding a guaranteed reliability and the ultimate in customer satisfaction. We use only the highest quality British steel, which is manufactured into a flawless, error free, wire product.

Black Annealed Wire

We supply black annealed wire in a number of forms including cut and looped, rework coils, cut bars, catchweight coils and formers. Our black annealed rework coils and formers are supplied to suit automatic baling machinery and are produced to customer requirements.

Cut bars can be supplied in any diameter and length specification, the product has a flawless scale-free surface and exceptional strength and pliability. Cut and looped specialised manual tying wire is finished with a looped end and has a wide diversity of sizes, diameters and tensile strengths to suit customer specifications. Catchweight Coils are supplied 20kg coils upwards.

Galvanised Wire

All of our galvanised products are manufactured to meet the industry standards. We supply cut and looped and formers in a galvanised finish, to customers specifications.

We are one of a handful of manufacturers in Europe that have full facilities to manufacture galvanised wire. This means we have total control over the quality and manufacturing process making sure identical batches are produced time after time. Consistency and precision is key when manufacturing galvanised formers

Innovation and Quality

Over the last ten years advancements have been made with baling machinery which has resulted in a need for a more precise quality reliable baling product that meets industry standards.

DRB's wire today has technically changed and advanced in line with the engineering requirements of balers. Our drawing blocks are the most technically advanced on the market for drawing technology. It is widely acknowledged within the UK that DRB are at the top of our field for service, quality and delivery. Most of the specifications on the market today have been established by DRB and we consistently strive to improve and amend these as technology advances. We provide full, certified product traceability, whilst working to ISO 9001 standards.
